

# Front End Nanodegree Syllabus

*Build Stunning User Experiences*

## Before You Start

You've taken the first step toward becoming a web developer by choosing the Front End Nanodegree program. In order to succeed, we recommend having experience using the web, being able to perform a search on Google, and (most importantly) the determination to keep pushing forward! Prior programming experience is using JavaScript or another programming language is recommended. If you'd like to prepare for this Nanodegree, check out our [Introduction to Programming Nanodegree Program](#).

The Front-End Web Developer Nanodegree is composed of 5 projects. With each project, you'll create something to demonstrate your mastery of in-demand skills. Projects range in complexity and each builds upon the last. In the end, you will have built a portfolio of projects, including a select set that are resume-worthy.

**Prerequisites:** You should have prior experience building web pages with HTML, CSS, and JavaScript (or another programming language). Success in this program requires meeting the deadlines set for your cohort and devoting at least 10 hours per week to your work, so drive, curiosity, and an adventurous attitude are highly recommended!

You will also need to be able to communicate fluently and professionally in written and spoken English.

**Educational Objectives:** In this Nanodegree program, you'll learn front-end web development skills including HTML, CSS, and JavaScript. You'll explore different JavaScript design patterns, implement version control in applications you build, and become skilled with common developer tools, testing suites, and frameworks.

**Length of Program\*:** 160 Hours

**Textbooks required:** None

**Instructional Tools Available:** Video lectures, Mentors, Forums

\*The length is an estimation of total hours the average student may take to complete all required coursework, including lecture and project time. If you spend about 10 hours per week working through the program, you should finish in 16 weeks, so approximately 4 months. Actual hours may vary.

# Part 1: The Building Blocks of Front-End Development

In this section, you'll be building a portfolio website. You will be provided a design mockup as a PDF-file, and you must replicate that design in HTML and CSS. You will develop a responsive website that will display images, descriptions and links to each of the portfolio projects you will complete through the course of your Nanodegree program on any size of screen.

## Supporting Lesson Content: HTML Syntax

Lesson Title	Learning Outcomes
HTML Syntax	<ul style="list-style-type: none"><li>→ Identify the parts that make up an HTML tag</li><li>→ Determine when to use specific HTML tags</li><li>→ Correctly structure nested HTML content</li><li>→ Decide between a variety of text editors for writing code</li></ul>

## Supporting Lesson Content: CSS Syntax

Lesson Title	Learning Outcomes
CSS Syntax	<ul style="list-style-type: none"><li>→ Identify the benefit of separating style from content</li><li>→ Use CSS to style a website</li><li>→ Test styles by manipulating CSS properties</li><li>→ Use CSS references to lookup standard CSS properties and values</li></ul>
How to Write Code Faster	<ul style="list-style-type: none"><li>→ Use keyboard shortcuts to write code faster</li><li>→ Use code editor packages and themes to improve workflow and write code more efficiently</li></ul>

## Supporting Lesson Content: Responsive Web Design

Lesson Title	Learning Outcomes
Why Responsive	<ul style="list-style-type: none"><li>→ Create your own responsive web page that works well on any device: phone, tablet, desktop or anything in between.</li><li>→ Explore what makes a site responsive and how some common responsive design patterns work across different devices.</li><li>→ Create your own responsive layout using the `viewport` tag and CSS media queries.</li><li>→ Experiment with major and minor breakpoints</li><li>→ Optimize text for reading.</li></ul>
Starting Small	<ul style="list-style-type: none"><li>→ Build HTML elements for any screen size.</li><li>→ Use the browser viewport to create consistent user experiences.</li></ul>
Building Up	<ul style="list-style-type: none"><li>→ Use media queries and breakpoints to create responsive web page designs</li><li>→ Create flexible HTML elements with an introduction to Flexbox</li></ul>

## Supporting Lesson Content: Writing READMEs

Lesson Title	Learning Outcomes
Writing READMEs	<ul style="list-style-type: none"><li>→ Identify Markdown syntax</li><li>→ Explain the importance of documentation</li><li>→ Write Markdown to document project instructions and information</li></ul>

## Part 2: Javascript & The DOM

In this Part, you'll demonstrate your mastery of HTML, CSS, and JavaScript by building a complete browser-based card matching game (also known as Concentration). From building a grid of cards, adding functionality to handle user input, and implementing gameplay logic -- you'll combine all your web development skills to create a fully interactive experience for your users.

### Supporting Lesson Content: JavaScript & the DOM

Lesson Title	Learning Outcomes
<b>The Document Object Model</b>	<ul style="list-style-type: none"><li>→ Learn how the DOM is constructed</li><li>→ Use DOM methods to select page elements</li><li>→ Figure out where an Element's properties come from</li></ul>
<b>Creating Content with JavaScript</b>	<ul style="list-style-type: none"><li>→ Use DOM and JavaScript to add new content to the page</li><li>→ Learn DOM and JavaScript to remove page content</li><li>→ Use DOM and JavaScript to style page elements</li></ul>
<b>Working with Browser Events</b>	<ul style="list-style-type: none"><li>→ Discover the hidden world of browser events</li><li>→ Use DOM and JavaScript to respond to specific events</li><li>→ Learn when the web page is ready to be modified and controlled</li></ul>
<b>Performance</b>	<ul style="list-style-type: none"><li>→ Learn how to measure the speed of your DOM and JavaScript code</li><li>→ Identify code that causes Reflow and Repaint issues</li><li>→ Explain how the JavaScript Event Loop works</li></ul>

## Part 3: Object-Oriented JavaScript

Objects in JavaScript encapsulate both data and functionality. You'll create, access, and modify objects to build a solid foundation for object-oriented programming. For the project, you'll recreate the classic arcade game Frogger. You will be provided visual assets and a game loop engine; using these tools you must add a number of entities to the game including the player characters and enemies.

### Supporting Lesson Content: Web Accessibility

Lesson Title	Learning Outcomes
<b>Accessibility Overview</b>	→ Explore the diversity of different users experience with websites and applications. Learn about using screen readers practically and recognize the challenge of building web experiences for all users.
<b>Focus</b>	→ Learn how important focus is to maintain an accessible site. Maintain focus using the Tabindex, Keyboard Design Patterns, and Offscreen Content.
<b>Semantics Basics</b>	→ Dive into the differences between visual UI and semantically designed accessible UI. Add semantic elements to HTML to create a user interface that works for everyone.
<b>Navigating Content</b>	→ Implement effective semantic navigation using headings, link text and landmarks.
<b>ARIA</b>	→ Sometimes an HTML element may not have a role or value assigned semantically. In this lesson, you'll use ARIA attributes to provide context for screen readers.
<b>Style</b>	→ Incorporate CSS styling into your accessible web design and use accessible color schemes to improve accessibility.

### Supporting Lesson Content: Object-Oriented JavaScript

Lesson Title	Learning Outcomes
<b>Objects in Depth</b>	<ul style="list-style-type: none"><li>→ Access an object's properties</li><li>→ Create objects using <i>object literal notation</i></li><li>→ Add properties to objects</li><li>→ Remove properties from objects using the <i>delete</i> operator</li><li>→ Write methods to access an object with the <i>this</i> keyword</li><li>→ Compare an object with another object</li><li>→ Identify global variables as properties of the <i>window</i> object</li><li>→ Identify the risks of using global variables</li><li>→ Extract properties and values from an object</li></ul>

<b>Functions at Runtime</b>	<ul style="list-style-type: none"> <li>→ Analyze why JavaScript functions are <i>first-class</i> functions</li> <li>→ <i>Callback</i>: pass a function as an argument into another function</li> <li>→ <i>Runtime scope</i>: identify variables available for a function to use</li> <li>→ Analyze how the JavaScript interpreter accesses variables through the <i>scope chain</i></li> <li>→ Utilize a <i>closure</i> to pass arguments implicitly, and to store a snapshot of state at function declaration</li> <li>→ Write an <i>immediately-invoked function expression</i> (IIFE) to create private state</li> </ul>
<b>Classes and Objects</b>	<ul style="list-style-type: none"> <li>→ Model real-world "things" using object-oriented programming</li> <li>→ Write a <i>constructor function</i> to instantiate objects</li> <li>→ Identify various ways a function can be invoked, including each approach's effect on the value of <i>this</i></li> <li>→ Leverage <i>call</i>, <i>apply</i>, and <i>bind</i> to manually set the value of <i>this</i></li> <li>→ Access and add properties to an object's <i>prototype</i></li> <li>→ Implement <i>prototypal inheritance</i> to base an object on another object</li> </ul>
<b>Object-Oriented Design Patterns</b>	<ul style="list-style-type: none"> <li>→ Use a <i>mixin</i> to copy data and functionality from a source object to a target object</li> <li>→ Create an object using a <i>factory function</i></li> <li>→ Create an object using a <i>functional mixin</i></li> <li>→ Leverage the <i>Module Pattern</i> to create private properties</li> <li>→ Leverage the <i>Revealing Module Pattern</i> to maintain encapsulation while providing public access to specified properties</li> </ul>

## Supporting Lesson Content: ES6

Lesson Title	Learning Outcomes
<b>ES6 Functions</b>	→ With ES6, functions are getting some much-needed improvements. Learn a number of new things including arrow functions and classes.
<b>ES6 Built-ins</b>	→ The JavaScript environment provides you with a number of features by default. You'll learn about Sets, Maps, Proxies, Generators, how iteration works, and more!
<b>ES6 Professional Developer-fu</b>	→ With this massive improvement, not all browsers are able to support this new version of JavaScript. You'll learn about using polyfills and transpiling your ES6 JavaScript code to ES5.

## Part 4: JavaScript Tools & Testing

In this project, you'll be learning about testing with Javascript. Testing is an important part of the development process and many organizations practice a standard known as "test-driven development" or TDD. This is when developers write tests first, before they ever start developing their application. Whether you work in an organization that writes tests extensively to inform product development or one that uses tests to encourage iteration, testing has become an essential skill in modern web development!

### Supporting Lesson Content: Web Tooling & Automation

Lesson Title	Learning Outcomes
<b>Introduction</b>	→ Learn the foundations of what web tooling is and how to prevent over-optimization.
<b>Productive Editing</b>	→ Get your text editor setup, learn all of its powerful features and keyboard shortcuts.
<b>Powerful Builds</b>	→ Start exploring the Gulp build system and automate many of the processes you perform multiple times throughout the course of your work.
<b>Expressive Live Editing</b>	→ Setup LiveReload to automatically reload your browser every time you make a change in your code.
<b>How to Prevent Disasters</b>	→ Learn how to prevent cross-browser issues in your CSS, prevent JavaScript errors, and more - all with your tool pipeline!
<b>Awesome Optimizations</b>	→ Learn how to concatenate, minimize, transpile, and more!

### Supporting Lesson Content: JavaScript Testing

Lesson Title	Learning Outcomes
<b>Rethinking Testing</b>	→ Explain the benefits of Test-Driven Development → Use tests to identify expectations of code functionality
<b>Writing Test Suites</b>	→ Use the Jasmine testing framework → Identify the key functions that make up the Jasmine framework → Explain the Red-Green-Refactor life cycle of testing → Write Jasmine tests to validate asynchronous code

## Part 5: Front-End Applications

For this project, you will convert a static webpage to a mobile-ready web application. You will take a static design that lacks accessibility and convert the design to be responsive on different sized displays and accessible for screen reader use. You will also begin converting this to a Progressive Web Application by caching some assets for offline use.

### Supporting Lesson Content: Javascript Design Patterns

Lesson Title	Learning Outcomes
<b>Changing Expectations</b>	<ul style="list-style-type: none"><li>→ React to changing product specifications and developer expectations</li><li>→ Explore the Model-View-Controller design pattern</li><li>→ Analyze an existing application for MVC structure</li></ul>
<b>Refactoring With Separation Of Concerns</b>	<ul style="list-style-type: none"><li>→ Write code with discrete areas of responsibility in an MVC application</li><li>→ Refactor an existing application to make use of modern code design practices</li></ul>

### Supporting Lesson Content: JavaScript Promises

Lesson Title	Learning Outcomes
<b>Creating Promises</b>	<ul style="list-style-type: none"><li>→ Learn what a promise is, how it makes writing asynchronous JavaScript simpler and how to handle errors.</li></ul>
<b>Chaining Promises</b>	<ul style="list-style-type: none"><li>→ Create sequences of asynchronous work by chaining Promises together and dive into more advanced error handling.</li></ul>

### Supporting Lesson Content: Asynchronous JavaScript

Lesson Title	Learning Outcomes
<b>Ajax with XHR</b>	<ul style="list-style-type: none"><li>→ Connect to external web APIs to power asynchronous browser updates</li></ul>
<b>Ajax with jQuery</b>	<ul style="list-style-type: none"><li>→ Use the jQuery Javascript library to build Ajax requests and handle API responses</li><li>→ Handle error responses with Ajax</li></ul>
<b>Ajax with Fetch</b>	<ul style="list-style-type: none"><li>→ Use the new Fetch API to make asynchronous requests and handle the returned data</li></ul>

## Supporting Lesson Content: Front-end Frameworks

Lesson Title	Learning Outcomes
<b>Features of Single Page Apps</b>	→ Learn about the features of a single page web application.
<b>Examine a Framework's Source</b>	→ Dig around in the Backbone framework to discover how many of its most popular features work.
<b>Angular</b>	→ Learn how to build a single page application in the Angular framework.
<b>Ember</b>	→ Learn how to build a single page application in the Ember framework.

## Supporting Lesson Content: Offline Web Apps

Lesson Title	Learning Outcomes
<b>The Benefits of Offline First</b>	→ Discover the differences between a standard web app and an offline-first application and get an introduction to new APIs.
<b>Introducing the Service Worker</b>	→ Recognize the differences between good, poor, intermittent, and missing connectivity for your users, and master how to make applications that navigate these conditions with ease.
<b>IndexedDB and Caching</b>	→ Use the IndexedDB API, along with Service Workers, to write caching solutions that will make your applications more performant.

# Extracurricular Material

## Lesson Content: High Conversion Web Forms

Lesson Title	Learning Outcomes
Efficient Inputs	→ Get started using the proper input types to make forms as simple to complete as possible for your users.
Fast Forms	→ Begin optimizing entire forms, rather than individual elements, to create high conversion web forms.
Touch Support	→ Learn about the special considerations required when building excellent forms on mobile devices, such as touch events.

## Lesson Content: Client Server Communication

Lesson Title	Learning Outcomes
HTTP's Request/Response Cycle	→ Learn the ins and outs of requests. Understand how a page is requested, the headers that are received, HTTP codes, and how data is transferred.
Security	→ Security is vital for every web application! Learn about common security pitfalls and how to avoid them.

## Lesson Content: Shell Workshop

Lesson Title	Learning Outcomes
Shell Workshop	→ The Unix shell is a powerful tool for developers of all sorts. You'll get a quick introduction to the very basics of using it on your own computer.

## Lesson Content: Version Control with Git & GitHub

Lesson Title	Learning Outcomes
What is Version Control	→ You'll learn about the benefits of version control and install the version control tool Git!
Create A Git Repo	→ Create a new repository from scratch → Cloning an existing repository.
Review A Repo's History	→ Review an existing Git repository's history of commits.

	<ul style="list-style-type: none"> <li>→ Change how Git Log displays information.</li> <li>→ View files that have been modified.</li> <li>→ View changes that have been made.</li> </ul>
<b>Add Commits To A Repo</b>	<ul style="list-style-type: none"> <li>→ Make commits that are saved to the repository.</li> <li>→ Write descriptive commit messages.</li> <li>→ Verify the changes you're about to save to the repository.</li> </ul>
<b>Tagging, Branching, and Merging</b>	<ul style="list-style-type: none"> <li>→ Add special markers called tags to commits.</li> <li>→ Work on isolated development tracks by making use of Git's branches.</li> <li>→ Combine branches together.</li> </ul>
<b>Undoing Changes</b>	<ul style="list-style-type: none"> <li>→ Modify or undo changes that have been saved to a repository.</li> </ul>
<b>Working With Remotes</b>	<ul style="list-style-type: none"> <li>→ Create remote repositories on GitHub.</li> <li>→ Get and send changes to a remote repository.</li> </ul>
<b>Working On Another Developer's Repository</b>	<ul style="list-style-type: none"> <li>→ Create copies of a project by forking another developer's repository.</li> <li>→ Collaborate with other developers by contributing to a public project.</li> </ul>
<b>Staying In Sync With A Remote Repository</b>	<ul style="list-style-type: none"> <li>→ Leverage pull requests to send suggested changes to another developer.</li> <li>→ Move or combine commits with <code>`git rebase`</code>.</li> </ul>

## Lesson Content: Intro to jQuery

Lesson Title	Learning Outcomes
<b>The Basics: the DOM, \$, and Selectors</b>	<ul style="list-style-type: none"> <li>→ Enter the exciting, interactive world of the DOM! Learn how to use JavaScript and jQuery to select and manipulate HTML elements on a page.</li> </ul>
<b>The Tricks: DOM Manipulation</b>	<ul style="list-style-type: none"> <li>→ Learn to manipulate the DOM and change a web page dynamically.</li> </ul>
<b>Event Listeners with jQuery</b>	<ul style="list-style-type: none"> <li>→ Learn how to use jQuery to listen for events (like a mouse click or the pressing of a key on the keyboard) and respond to these events.</li> </ul>
